The story of fiber optics is basically one of constant innovation and, honestly, a bit of magic in how it's changed global communication. It started in the 1960s as a physics experiment and now forms the backbone of the internet, changing how information zips around the planet. These days, new. Fiber-optic communication is a form of optical communication for transmitting information from one place to another by sending pulses of infrared or visible light through an optical fiber. Dates, of course, are often approximate, as putting a firm date on the introduction of a new technology is often impossible! the most important. Fiber optics, illustrated here, underpin much of modern communications. Since I was involved in fiber.
