

How loud is the fan of the core switch

Preview

The normal noise level of the Nintendo Switch fan is around 25-30 decibels (dB), which is equivalent to a quiet library or a soft whisper. However, the fan can get louder when the console is under heavy load or when it's hot, which can reach levels of up to 50-60 dB. I am not the sensitive type, but it was very noticeable for someone who has played on my switch fairly regularly. Usually when the fan engages (when I play for a while or a graphic intensive game) it sounds like a. Clean the vents: Dust buildup makes your fan spin harder and louder--hit it with short bursts of compressed air. Hear grinding? That's not normal.
