

Article Overview

A Lighting Intelligent Control Module Distribution Box is a modular, programmable system that integrates power distribution with smart lighting control, enabling automated, flexible, and energy-efficient management of luminaires.

Overview

Intelligent lighting distribution boxes combine traditional electrical distribution with advanced control capabilities. They allow individual or grouped control of connected luminaires through digital communication protocols such as DALI (Digital Addressable Lighting Interface) or proprietary bus systems, enabling plug-and-play installation and software-based configuration without rewiring ().

Key Features

- o Modular Design: Many boxes, such as the SPO.227/248, are modular and pluggable, allowing easy expansion or upgrades ().
- o Programmable Control: Boxes can execute predefined logic for lighting behavior, including on/off switching, dimming, and daylight harvesting ().
- o Sensor Integration: Compatible with motion detectors, brightness sensors, and smart panels to automate lighting based on occupancy or ambient light ().
- o Communication Bus: Uses bus networks (e.g., M-Bus or DALI BUS) to transmit control signals between modules, sensors, and luminaires ().
- o Energy Efficiency: Intelligent control can reduce energy consumption by over 50% through dimming, scheduling, and adaptive lighting ().

Technical Specifications

- o Voltage and Current Ratings: Typical low-voltage boxes operate at AC 380V, 50Hz, with main busbar currents ranging from 10A to 100A and short-time withstand currents up to 4.5 kA ().
- o Protection and Enclosure: IP30 for operating face and IP20 for other surfaces, suitable for indoor installation ().
- o Load Capacity: Maximum recommended load per channel is often 6A, with total box load up to 16A; supports multiple digital dimming ballasts ().
- o Expansion Options: Some systems allow linking multiple boxes via BUS loops or adding expansion units to control additional luminaires ().

Applications

Intelligent Lighting Module Control Distribution Box

- o Commercial Buildings: Offices, conference rooms, and lobbies where automated lighting improves comfort and energy efficiency.
- o Industrial Facilities: Warehouses and production areas requiring flexible lighting zones.
- o Smart Homes and Automation: Integration with building automation systems for adaptive lighting control ().
- o Emergency and Essential Lighting: Dual control/supply boxes can manage essential and non-essential circuits independently ().

Advantages

- o Flexible Configuration: Adjust lighting schedules, dimming levels, and control logic via software without physical rewiring.
 - o Scalability: Modular design allows easy expansion as building requirements change.
 - o Enhanced Safety: Integrated protection and BUS isolation prevent damage from electrical faults.
 - o Energy Savings: Optimized lighting control reduces electricity consumption and supports compliance with energy efficiency regulations ().
- In summary, a Lighting Intelligent Control Module Distribution Box is a versatile solution for modern lighting systems, combining power distribution, intelligent control, and modular expandability to deliver energy-efficient, automated, and programmable lighting management.

This product has been discontinued and is no longer available. Lighting control modules are a new range of intelligent marshalling

Get our durable and high-quality distribution box (Electric Enclosure) with a nice glass door and modular magnetic ducts and

Lighting isn't just about flipping a switch anymore. Today, smart systems let you shape how

These challenges have driven new developments in power distribution technology. Perhaps the newest development

Learn all about the Ex-Or CDH4U5 Lighting Control Module. Click to find product details, documentation, ordering info and more.

Smart street light control cabinets represent a critical infrastructure component for cities transitioning to intelligent

OVERVIEW The ONV-IoT9000-CK-SI intelligent power box is an intelligent power control system with

Intelligent Lighting Module Control Distribution Box

high integration, strong

Lighting Control Modules Our range includes DALI2 and other cutting-edge protocols, ensuring seamless integration with your

Connect Digital Box is a highly flexible, configurable and intelligent lighting control module, which features

Intelligent panelboards for automated lighting control and improved energy efficiency. Reduce energy costs

This intelligent lighting control module helps to replace fixed wiring with plug-in simplicity and soft wiring connections. This results in

Today's intelligent lighting controls offer more flexibility and functionality than ever, benefiting both

Click Smart offer intelligent and innovative products that make it easier than ever for customers to provide upgrades to wiring

The manufacturer of the lighting control panelboard shall be regularly engaged in manufacture of electrical distribution equipment,

High-quality electrical lighting distribution boxes are indispensable components in modern lighting systems, offering a combination of

Delmatic's DALI Buswire IMDB is an intelligent modular distribution box providing total flexibility and monitoring of DALI lighting and
