

Article Overview

Prefab houses in Kuwait start around 15,000 KWD, while prefabricated power distribution boxes (E-Houses) are custom-engineered and priced based on specifications.

Prefabricated House Costs

Prefab homes in Kuwait vary widely depending on size, design, materials, and customization. Basic models start at approximately 15,000 KWD, while high-end or fully furnished homes can reach 100,000 KWD or more. Smaller units or modular homes may also be available at lower prices, with some listings showing units around \$2,084 per unit for simple models. Prefab homes are energy-efficient, quick to install, and suitable for urban or remote locations.

Power Distribution Box (E-House) Overview

An E-House is a prefabricated, walk-in modular enclosure designed to house medium and low voltage switchgear and auxiliary electrical equipment. These units are custom-engineered to protect critical electrical systems and can be delivered skid-mounted, wheel-mounted, or ready for field installation with minimal setup. They are ideal for integrating with prefabricated homes, industrial sites, or remote installations.

Pricing Considerations

The cost of an E-House depends on several factors:

- o Voltage rating and capacity (medium vs low voltage)
- o Size and number of switchgear units
- o Customization and auxiliary equipment
- o Delivery, installation, and commissioning requirements Because E-Houses are custom-built, suppliers typically provide a quotation after reviewing technical specifications and project requirements. For a prefabricated house, the E-House can be scaled to match the home's electrical load, ensuring safety and efficiency.

How to Obtain a Quote

- o Contact suppliers such as KHAN Offshore or local electrical contractors in Kuwait.
- o Provide specifications: expected load, number of circuits, voltage, and any special requirements.
- o Request a turnkey solution: some suppliers can handle design, delivery, and installation.
- o Compare multiple quotes to ensure competitive pricing and compliance with local regulations. By combining a prefab home with a properly sized E-House, homeowners in Kuwait can achieve a cost-effective,
