

Quote for 1GB SD-WAN device

Article Overview

A 1Gbps SD-WAN device typically costs between \$496 and \$1,256 per month for subscription-based services, with hardware options like HPE Aruba EdgeConnect or Cisco ISR 1100 series available.

Pricing Overview

SD-WAN pricing varies widely depending on vendor, features, and deployment model. For a 1Gbps device, monthly recurring costs (MRC) generally range from \$496 to \$1,256 per site, reflecting differences in service level, security features, and management options (Lightyear, 2026). Hardware costs are often included in subscription models, but standalone devices like the HPE Aruba EdgeConnect EC-10108 or Cisco ISR 1100 series can be purchased separately, with pricing influenced by port configuration, PoE support, and optional features like LTE/5G failover or DDoS protection (HPE, Cisco) .

Vendor Options

- o HPE Aruba EdgeConnect EC-10108: Supports 1G/10G fiber, combo ports, PoE up to 60W, hybrid WAN (MPLS, LTE/5G, internet), and centralized orchestration via Aruba Networking Central. Optional security features include adaptive DDoS and SWG integration .
- o Cisco ISR 1100 Series: Offers 1Gbps throughput with SD-WAN IOS XE Universal, dual GE WAN ports, LTE options, and subscription-based support packages. Cisco pricing varies by software features and deployment model .

Cost Factors

- o Bandwidth Requirements: Higher throughput or heavy cloud application use increases costs.
- o Feature Set: Advanced security, application visibility, and failover options add to monthly fees.
- o Deployment Model: DIY, co-managed, or fully managed services affect both hardware and operational costs.
- o Number of Sites: More branches increase total cost due to additional hardware and licensing.

Summary

For budgeting purposes, a 1Gbps SD-WAN device can be expected to cost \$500-\$1,250 per month in a subscription model, with hardware options available from HPE Aruba and Cisco. Costs may vary based on features, deployment, and vendor selection, and most organizations achieve ROI within 12-24 months due to reduced operational and network costs (TVG Consulting, 2025) .
